

COMPUTER NETWORK LABORATORY 2018

Date: 09.01.2018

Assignment 1:

1. Create a server listening on a port (last 5 digits of your registration number). On receiving a text word from the client, it computes the palindrome, it displays the received text and the palindrome and sends it back to the client.

Create a client which connects to a server and sends a text-word to the server. On receiving back the palindrome of the text from the server, the client side displays both the sent-word and the palindrome received from the server.
